Text and Document Construction by Manic Mom on SCS

Lay the bag on a surface as shown in this picture.

Flip the base of the bag "over".

Put a strip of tacky tape on the outer edge of the base (of the side facing up).

Tape this edge (back in its original position) to the bag by returning it to its original fold configuration.

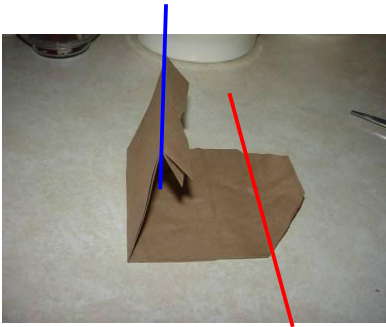

Snip the corners of the remaining "base", both at a 45 degree angle.

This creates the flap that eventually folds over and tucks under the ribbon.

Fold an edge about 1" in width on the open end of the bag.

Fold the bag again, moving the blue line noted in the picture to the left, up to the red line. This makes the card a standard sized card and it will fit into a standard sized envelope.

Unfold the last fold and add a piece of ribbon to serve as the means for holding the snipped flap down.

Position the ribbon BEFORE gluing or taping it down!
